

## Deception 1: the fake map sent to Sport England in Feb 2016

I have drawn yellow lines over the fake plan to the left to show where the outline of the pitch should be (as shown on the actual plan to the right)

### **Fake plan sent to Sport England in Feb 2016**

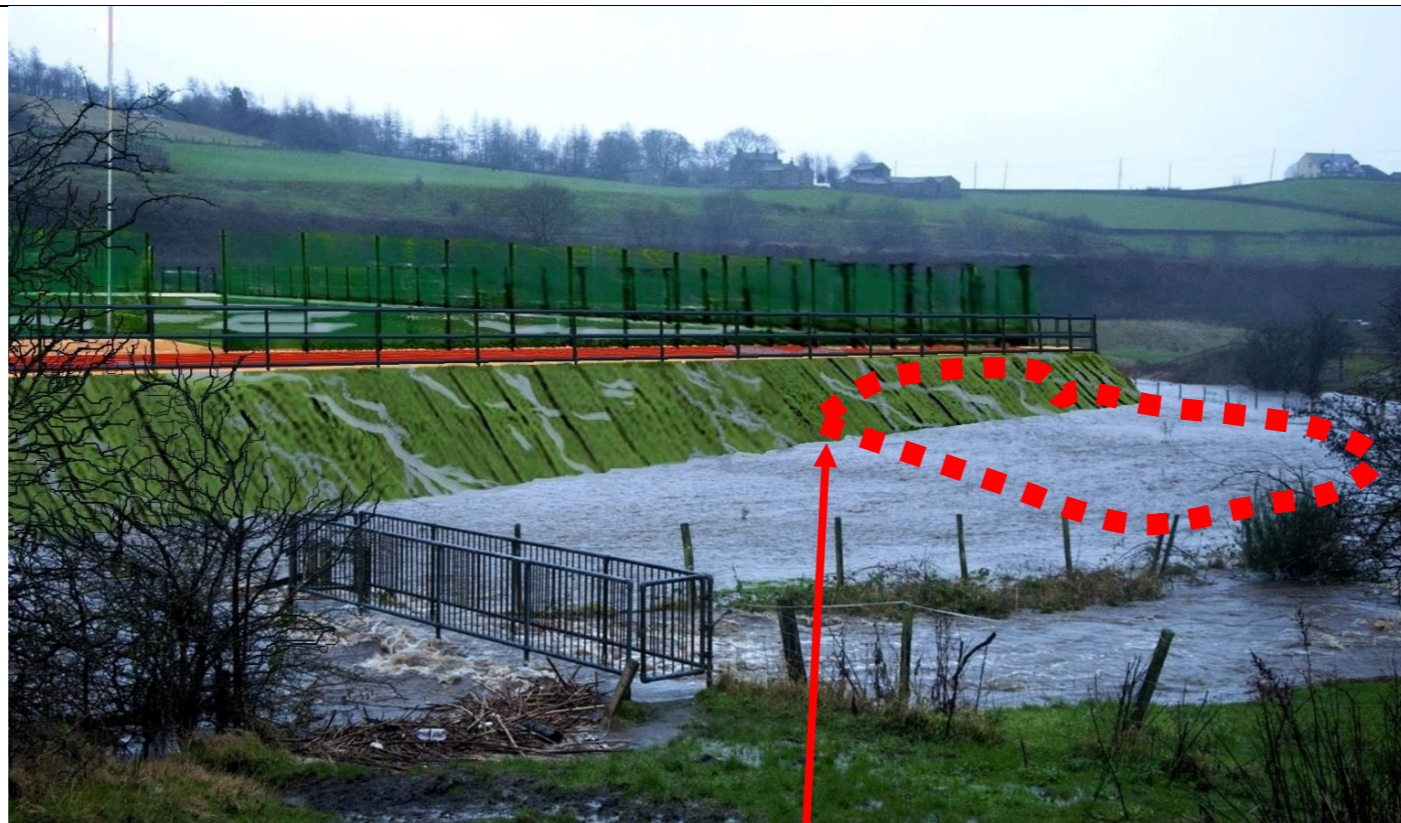

1. Sport pitch area is made narrower to make it appear about 15-20 m further away from river edge
2. The flood extent (blue bit) at the worst case scenario is misrepresented as being 1/3 less in area than all available factual evidence (from EA data & photos).

### **Actual plan of sport pitches submitted with the planning application.**

(the river is the hatched area to the west of pitches)

**Deception 2: 'WYG Flood Update' report meant to 'correct' the above 'mistake' (i.e. the fake plan) at the last minute (days before the planning committee in April 2016) – still misleads on flood extent AND Oldham Council failed to re-consult the EA & Sport England with this 'update'!**

Actual flood extent when river overtops (showing location of proposed raised pitches)

Falsified flood extent as represented in diagram sent to Sport England in 2016 (flood area is shown as less than 1/3 the actual area – cut across with straight line)!

This is so that they can say flooding will only affect the grass pitch to south & not the AGP to north (an expensive built facility).

**This has been done to deliberately mislead Sport England & prevent them from objecting.**
